Atabak Nikouseresht

FINANCIAL RISK & DATA ANALYTICS

Bologna, Italy | +39 344 561 7780 | Email
LinkedIn | GitHub | Portfolio

PROFILE

MSc student in Applied Economics and Markets at the University of Bologna, applying economic and financial reasoning, Python, SQL and econometric methods to risk and model evaluation. Project work includes chronological fraud evaluation and collaborative financial analysis; experience includes market feasibility and ongoing AI-assisted knowledge workflows. Seeking junior roles in financial risk, fraud analytics, financial data or model validation.

EDUCATION

MSc Applied Economics and Markets | University of Bologna | 2024–Present
Financial and Monetary Economics track. Selected coursework: Time Series Econometrics, Python for Economists, Statistical Methods for Economic Analysis, Portfolio Theory, Derivatives and Macrofinance.

BSc Economics | Ferdowsi University of Mashhad | 2019–2023

EXPERIENCE

Curricular Intern | Fondazione Yunus Italia — ETS | Bologna | Oct 2026–Present
- Organizes EU-project information for AI-assisted knowledge workflows and explores retrieval-augmented generation concepts; contributes to economic-financial feasibility screening.

Market Study & Feasibility | NIK Servat | Oct 2023–Mar 2024
- Assessed market size, competitive conditions and risk factors for investment and financing feasibility; prepared market comparisons and Excel-based analyses.

Blockchain & Cryptocurrency Instructor | Forency Group | Aug 2021–Feb 2022
- Delivered blockchain, digital-asset and financial-technology training for non-specialist learners.

SELECTED PROJECTS

IEEE-CIS Fraud Detection | Python, scikit-learn, XGBoost
Compared Logistic Regression and XGBoost with chronological training, calibration and final-evaluation partitions. XGBoost temporal holdout: ROC-AUC 0.888, average precision 0.480; fixed top-1% batch precision 0.871. Retrospective evaluation, not deployed performance. Repository · Current results

Fraud Detection Streamlit App | Python, scikit-learn, Streamlit
Local transaction-form interface around a saved scikit-learn pipeline; demonstrates interactive model-to-interface workflow. The legacy artifact has no established training provenance or real-world performance claim. Repository

Portfolio Theory & Asset Allocation | Collaborative University of Bologna report
With Alessandro Bonfiglio; applies diversification, mean–variance optimization, efficient frontiers, CAPM and Black–Litterman. Archival report, not a deployed allocation system. Report & errata

Hermes Crypto Lab | Research engineering
Market-data, backtesting and versioned simulated-execution workflow with validation controls; frozen forward paper validation, not live trading. Repository

Additional collaborative studies with Mahgol Lamei and Kimia Shokri: investment-deflator ADF/ARDL/VAR analysis and Netherlands 2011 education–employment OLS/logit study (associational findings). Reports · Study

SKILLS

Financial analysis: Fraud-risk analytics, market feasibility, portfolio theory, derivatives, financial and monetary economics.
Quantitative methods: Regression, time series, ADF/ARDL/VAR, cointegration, temporal validation, class-imbalance metrics, calibration concepts.
Tools: Python (pandas, NumPy, scikit-learn, XGBoost), SQL, Streamlit, Excel, Git/GitHub.

LANGUAGES & SELECTED TRAINING

Persian — native | English — professional working proficiency | Italian — elementary, currently studying
Selected training: Google Data Analytics modules; IBM Introduction to Data Analytics; Kaggle Python; Data Science (Ferdowsi University); Python Programming (Toplearn); IBM Blockchain Essentials V2.
